difference in games is the cat and zombie skins and some minor tweaks to the controls, the game is still the same and is a great fun game to play, so if you like zombie killing action then this is the game for you willy\_ : well, make sure you set the permissions properly for your users tinfoilhatter, nah, you need a copy of ubuntu for that willy\_ : look at your home, that will be owned by rootroot k1L\_ , what are you talking about? k1L\_ : i'm the one who installed the software on this Ubuntu how do i do that without putting it on another hd? tinfoilhatter, what do you want to do? you have to boot from usb k1L\_ : I thought you are talking about package manager k1L\_ like the Software Center k1L\_ , in this case tinfoilhatter, ahh this is a live iso? willy\_ : if you look at the home you get a .desktop file, the permissions are given to the .desktop file and not to the actual file k1L\_ , ok OerHeks: I just want to make the iso the bootable for the usb, I have a .iso file tinfoilhatter: unetbootin or a windows tool should make you bootable usb images unetbootin should do it k1L\_ : I have tried that. I keep getting a weird error. k1L\_ , on the permissions of .desktop files, the user shouldn't be able to see, right? willy\_ : the .desktop file is a file in a hidden folder, that is why the permissions are set on that k1L\_ , so I guess that .desktop files are invisible for the user, 82157476af
